How to replace the brake shoes of rear drum brake on Opel Corsa C

Carry out replacement in the following order:

Replace brake pads on Opel Corsa C in pairs for each axle. It ensures efficient braking

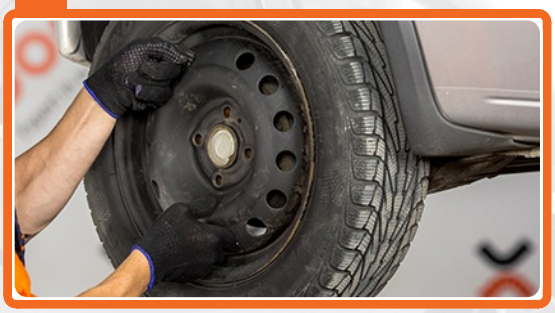
1

Loosen the wheel mounting bolts.

2

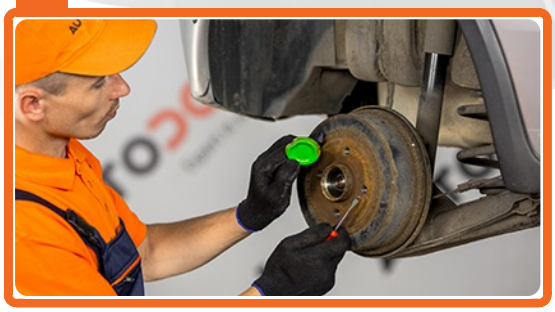
Raise the rear of the car and secure on supports.

3



Remove the rear wheels.

4



Remove the hub bearing protection cap.

5.1

Unscrew the mounting bolts and remove the brake drum from the hub.

5.2

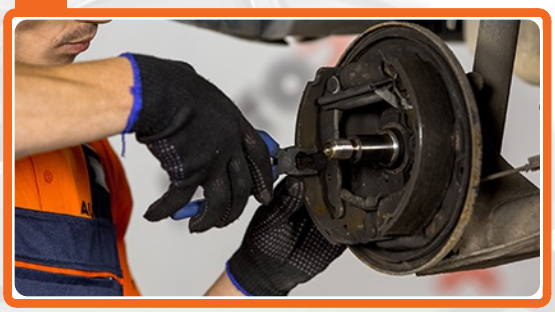
6

Disconnect the parking brake cable from the parking brake lever.

7.1

Take out brake pad retainer springs from the holes.

7.2



7.3

8

Pull both brake shoes with the adjuster from the working brake cylinder, avoiding damage to the boots. Remove both shoes from the mounting bracket.

AutoDoc recommends:

Clean the brake backplate and treat all the joint surfaces of the brake shoes with anti-squeal paste on both sides in the area with arrows.

9

Clean the brake drum.

AutoDoc recommends:

Examine the brake drum. Replace it if necessary.

10.1

Perform further demounting of the upper retaining spring and the adjuster mechanism.

10.2

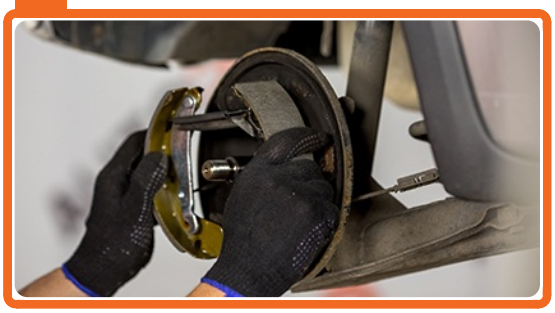
AutoDoc recommends:

When replacing the brake shoes use a new mounting kit.

11

Insert the clamping rod with an adjusting gear between the brake shoes and the upper return spring of brake shoes.

12



Install the brake shoes on the working brake cylinder on the bracket and on the brake-support plate bracket.

13

Insert the pins into the holes on the brake-support plate, press the brake shoes to the support plate and mount the clamps, holding the pins on the back of the plate by hand. Make sure the brake shoes are in correct position .

14

Install lower return springs

15

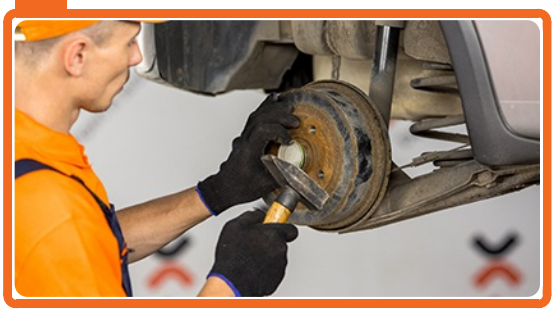
Connect the parking brake cable to the parking brake lever.

16.1

Install the brake drum and fasten it.

16.2

17



Install the hub bearing protection cap.

18

Install the wheel.

19

Lower the car and working in a cross order, tighten the wheel bolts.

AutoDoc recommends:

Slow down smoothly for first 150-200 km after the brake pads replacement. Avoid unneccessary and sharp braking to a stop.

Adjust the brake fluid level in the expansion tank.

We hope that this information have been useful for you!
